

Res. BEETROOT

### MADAVI

- Early type variety & Matures in 55-60 Days
- Large Round Dark red roots
- Average weight or root: 100-130 gm
- Very Strong foliage
- Excellent internal quality
- Root shape is maintained even under close spacing.
- Excellent field holding capacity (Stands in field up to 30 days after maturity without cracking or losing colour & taste)
- Wider adaptability
- High Yielding potential

Hy. RADISH

### WHITY

- Semi upright plant habit and grows well
- Early maturity hybrid.
- Harvest at 45-55 DAS
- Attractive smooth root with mild pungency.
- Root length 30-40 cm, straight and pure white
- Roots are firm textured with late pithiness enabling extended harvest
- Root can stay in soil for long period after maturity.

RADISH VARIETY

### PALLAVI (Palak Patta)

- Semi upright plant habit with dark green deep cut broad leaves
- Roots are ready for harvest after 47-52 days after sowing
- Straight and white roots tapering with 25-30 cm length
- Average root weight 250-350g without foliage
- Root flesh is soft and crispy with mild pungency
- Very late pithiness
- Hard bolter under low temperature conditions
- Tapering roots & less breakage at Harvest.

Res. CAULIFLOWER

### KAVYA

- Plants are vigorous, large and erect plant with dark green leaves
- Curd is well protected by leaves
- Curd Compact, dome shaped, white, weight 1.0-1.25 kg
- Ready to harvest in 55-60 days after planting
- Suitable for cool and dry temperate climate (winter) (Aug-Nov)
- Moderately heat tolerant.
- High Yielding potential

Res. CABBAGE

### NAVYA

- Plant - Compact, medium frame with bluish green leaves
- Head-Round, very compact with bluish green head
- Average Head weight 1-1.2 kg
- Duration -Early harvesting starts in about 60 days after planting
- Tolerant to black rot
- Very good field holding capacity (20 plus daya)
- Ideal for long distance transport

Res. AMARANTHUS

### GREEN

- Medium branching with erect growth habit.
- Stem is thick green with red basal part.
- Leaves are dark green colour.
- Suitable to all regions
- Ideal for March-September planting.

Res. AMARANTHUS

### RED (LAL SAG)

- Vigorous Erect Plant
- Broad red colour leaves with red Stem
- First cutting in 25-30 Days
- Suitable to all regions
- Grown during March-September

Res. PALAK

### SUPER GREEN

- Dark Green & Broad leaves
- More Number of Tender Leaves
- Late Bolting & Suit to Multi cutting
- Remain fresh for long time after harvest
- Tolerant to pest & diseases
- High Yielding Potential with better management
- Suitable to All Palak growing area throughout the year

Imported CORIANDER

### SUBASH

- Vigorous plant with Dark green, very attractive broad leaves with cut.
- Plants are fast growing with large stems.
- Late bolting type with good aroma
- Harvest in 35 days.
- Multi-cut with a very good heat tolerant
- Grown throughout the year.
- Tolerant to wilt.
- Performance is excellent also during hot summer.
