

HY. BHENDI

APURVA 99

- Medium Tall Plant with Good Vigor
- More Number of Branches
- First fruit harvest starts from 47-79 days after sowing
- Medium size fruit (12-14 cm) with Shining Dark
- Tender fruits with good quality
- Number of locus Five
- Duration 90-100 Days
- Tolerant to Yellow Vein Mosaic Virus
- High yielding (4-5 T/ac under better management)
- Suitable for fresh market & export

HY. BHENDI

SOUMYA-96

- Tall Vigorous plants and good branching.
- Thick, dark green glossy fruits of 12-14 cm length.
- Fruit weight is v good
- High yielding for fresh market and exports.
- Very attractive and uniform fruits.
- First harvesting in 48 to 50 days.
- Resistance YVMV & Tolerant to ELCV
- Suitable to all season cultivation

HY. BHENDI

KANAK 97

- Medium Tall & Semi erect plant with short inter nodes
- Branching is good & Leaf color is dark green.
- Fruit color is dark green.
- Fruit length is 8-10 cm & medium thickness
- Tender fruit with light spines
- Slender fruit with five ridges
- 1st picking starts from 48-50 DAS.
- More no. of pickings.
- High yielding for fresh market & export
- Moderately tolerant to YVMV

Res. BHENDI

SONAKSHI

- Dark Green Medium Size Tender fruits
- More Number of Branches
- High Fruit Weight & High Yield potential
- Medium Tall & First picking Starts from 50-55 days after Sowing
- Suitable for all season
- Tolerant to Yellow Vein Mosaic Virus

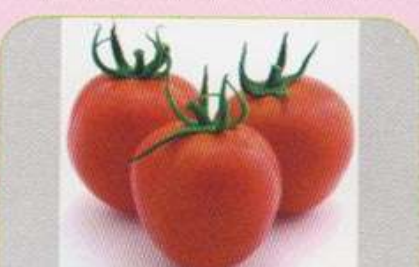

Hy. TOMATO

SIRI

- Determinate Growth Habit & Vigorous Plant
- First Harvest 55-60 Days after Transplanting
- Average Fruit weight 80-100 g
- Flattish Round Fruits
- Deep Red color at Ripening
- More acidic in nature
- Good Keeping Quality
- High Yield Potential
- Tolerant to TYLCV (Tomato Yellow Leaf Curl Virus)

Hy. TOMATO

ABHI

- Semi Determinate, Medium Height & Vigorous Plants
- Broad Leaves with excellent foliage cover
- First Harvest 60-65 days after Transplanting
- Average Fruit weight 80-100 g
- Oval Shape Fruits
- Attractive Red Colour
- Very Firm fruits & Suitable for Long Distance Transport
- High Yield Potential
- Tolerant to TYLCV (Tomato Yellow Leaf Cur{ Virus)

Res. TOMATO

ANJALI

- Tall, determinate & vigorous plant.
- 1st picking 60-65 DAS.
- Fruits are extremely uniform in size.
- Fruit color deep red.
- Fruit shape is square round.
- Fruit weight is 90-100 g.
- Excellent shelf life.
- Performing good under fluctuating temperature.
- High level of tolerance to TLCV

Hy. CHILLY

PRUTHVI-2

- Medium Height (70-80 Cm) & Bushy Type of Plants
- First Picking Starts from 75-80 days after transplanting
- Fruit Color is Dark Green & Dark Red
- Fruit length is 8-10 Cm & Diameter is 0.7-0.8 Cm
- Fruit Surface is Moderate wrinkles.
- Fruit Pungency is very high.
- Used for Green, Dry Red Chilly and for Industrial Utility
- Fruit bearing is heavy & continuous

Hy. CHILLY

APU-149

- Tall, Spreading, vigorous plant.
- First Picking starts from 75-80 days after transplanting.
- Yellowish Green Fruit turning to red after ripening.
- Fruit length is 14-16 Cm & Diameter is 1-1.2 Cm.
- Fruit Pungency is Very high.
- Suitable for both red and green purposes.
- High Yielding Hybrid.
- Suitable for Rainy, Summer and mild winter.
